Bogdan Rosca

Staff SDET / QA Team Lead at Contentsquare
Barcelona, Spain

Summary

Driven by a strong Quality Engineering mindset, I believe quality is not a gate, but a shared engineering responsibility spread across the entire development lifecycle and engineering department.

I am passionate about building scalable test automation frameworks, but also an entire ecosystem around it, where automation, leveraging APIs, AI adoption and engineering excellence amplify product reliability and team performance.

Professional interest:
- currently focused on AI-driven quality practices and intelligent automation
- dedicated to embedding Quality Engineering across the software lifecycle
- advocate of data-driven validation and observability in modern SaaS platforms
- enthusiastic about Web and Mobile product reliability at scale
- passionate about improving Developer Experience through automation and tooling

I am no stranger to:
- automation architecture and test frameworks like Playwright, Cypress and Pytest
- CI/CD pipelines and workflows creation using Github Actions
- AI-assisted testing and intelligent validation workflows
- API and integration validation
- microservices distributed systems
- web and mobile testing strategies
- full-stack quality practices, with hands on experience on both frontend and backend

Experience

Contentsquare

4 years

Staff SDET / Team Lead

May 2026 - Present (6 months)
Barcelona

80% SDET / 20% Team lead

Drive the transformation toward Agentic Quality, by redefining the existing Quality process, building automated workflows and tools that leverage LLMs to achieve a high Quality standard.

Lead the design of robust test frameworks, scalable automation workflows, and modern Quality practices baked into the software development process.

Champion innovation and AI adoption within Quality, reimagining processes and delivering highly automated, intelligent solutions that increase efficiency and velocity, while maintaining the highest quality standard.

Support the development of a group of 3 direct reports fostering growth through structured activities like one-to-one meetings, goals setting, quarterly performance reviews and personal development plan creation.

Main tasks and responsibilities:
- Lead transition to a new Quality model, created around LLM usage and integration as part of the quality process.
- Lead, hands-on, quality related initiatives, innovation projects and development of new testing tools.
- Encourage AI adoption throughout the team.
- Organise the work and lead a team of 3 Software Quality Engineers in test.
- Actively participate in the Quality Management committee.
- Actively contribute to the definition and improvement of Quality processes.

Projects:
- SaaS

Used tools:
- Claude Code, Github Copilot, Dust, AWS Bedrock, Playwright, Pytest, Github, Github Actions, Docker, Kubernetes, ArgoCD, React, Fast API, Postgres, JIRA, Confluence

Used languages:
- Python
- TypeScript

Development methodology:
- Agile

Senior SDET / Team Lead

February 2024 - May 2026 (2 years 4 months)

Barcelona, Catalonia, Spain

80% SDET / 20% Team lead

Drive the transformation toward a Quality Engineering model, positioning the Quality team as a transversal enabler across the Engineering department.

Lead the design of robust test frameworks, scalable automation workflows, and modern quality practices baked into the software development process.

Champion innovation and AI adoption within Quality, reimagining processes and delivering highly automated, intelligent solutions that increase efficiency and velocity, while maintaining the highest quality standard.

Support the development of a group of 3 direct reports fostering growth through structured activities like one-to-one meetings, goals setting, quarterly performance reviews and personal development plan creation.

Contribute as a key member of the Quality leadership team, shaping strategy and aligning quality initiatives with broader engineering objectives.

Main tasks and responsibilities:

- Lead transition to a new quality model, through onboardings, close collaboration, and monitoring.
- Lead, hands-on, quality related initiatives and innovation projects.
- Encourage AI adoption throughout the team.
- Organise the work and lead a team of 3 Software Quality Engineers in test.
- Actively participate in the Quality Management committee.
- Actively contribute to the definition and improvement of Quality processes.

Projects:

- SaaS

Used tools:

- Playwright, Pytest, AWS Bedrock, Dust, Github Copilot, Cursor, Tricentis, JIRA, Confluence, Github, Github Actions, Docker, Kubernetes, ArgoCD, React, Fast API

Used languages:

- Python

- TypeScript

Development methodology:
- Agile

Senior QA Engineer / QA Team Lead
November 2022 - February 2024 (1 year 4 months)
Barcelona, Catalonia, Spain

70% SDET / 30% Team lead

Lead and develop a team of 6 direct reports, driving performance and engagement through structured one-to-ones, goal setting, quarterly reviews, and tailored development plans that support both individual growth and business objectives.

Drive hands-on validation and innovation initiatives for a SaaS Analytics platform, strengthening test infrastructure and optimizing CI pipelines to improve reliability, scalability, and release confidence.

Contribute as an active member of the Quality leadership team, shaping processes, influencing strategy, and continuously improving quality practices across the organization.

Main tasks and responsibilities:
- Organise the work and lead a team of 6 Software Quality Engineers.
- Lead, hands-on, quality-related technical initiatives and innovation projects.
- Drive changes to the test infrastructure built around Pytest and Appium.
- Improve and extend the CI pipeline built with GitHub Actions.
- Align with Project Managers the needs and commitment of the Quality team.
- Review and approve test plans and test definitions based on functional and non-functional
requirements.
- Actively participate in the Quality Management committee.
- Actively contribute to the definition and improvement of Quality processes.

Projects:
- SaaS

Used tools:

▪ Appium, BrowserStack, Pytest, Postman, Proxyman, WDIO, TestRail, JIRA, Confluence, Github, Github Actions, Docker,
Kubernetes, ArgoCD

Used languages:
▪ Python
▪ TypeScript

Development methodology:
▪ Agile

Onna
Senior Quality Assurance Engineer/ Squad Lead
August 2020 - November 2022 (2 years 4 months)
Barcelona, Catalonia, Spain

Plan and validate the functionality, with a high focus on test automation, of a SaaS eDiscovery platform.
Actively participate in Agile ceremonies, act as interface of the team and backlog creation.
Contribute to the improvement of quality processes.

Main tasks and responsibilities:
▪ Act as Squad Lead
▪ Prepare and lead the review of test plans.
▪ Analyze and design test cases based on functional and non-functional requirements.
▪ Implement and execute automated test cases using Cypress or Pytest.
▪ Maintain and extend the test infrastructure.
▪ Review CI execution results and extend the CI pipeline.
▪ Regularly report the test execution status.
▪ Analyze identified deviations and provide a detailed report.
▪ Actively participate in the Bugs Review committee.
▪ Conduct exploratory testing using tools like Postman, Kubernetes, and Chrome DevTools.
▪ Actively contribute to the definition and improvement of quality processes.

Lead Agile ceremonies.
▪ Collaborate closely with the Project Manager in preparing sprint work packages.

Projects:

- SaaS

Used tools:

- Cypress, Pytest, Postman, TestRail, Jenkins, Github, Kubernetes, Argo, RabbitMQ, Shortcut,
Confluence

Used languages:

- Python,
- JavaScript

Development methodology:

- Agile

ERNI

3 years 3 months

Senior Consultant / Test Manager

September 2018 - August 2020 (2 years)

Barcelona, Catalonia, Spain

Support the growth of fellow consultants, through one-to-one meetings, creation of career development plans, objective setting and acting as an interface between direct reports and high level management.
Plan and validate the functionality of software products, according to the specific requirements, within a predefined test plan, considering processes, procedures and testing quality assurance standards.

Main tasks and responsibilities:

- Act as mentor (career development and interface with high management) for 7 consultants.
- Generate and present test plans.
- Analyze and design test cases based on functional and non-functional requirements.
- Create traceability between requirements and designed test cases.
- Implement and execute automated test cases under Python and Radish.
- Maintain and extend the test infrastructure.
- Log test results and compare them against the expected results.
- Generate and present test reports.
- Regularly report the status and document the found deviations.

- Analyze reported issues and provide a detailed report.
- Support the system level integration.
- Process knowledge and usage.

Projects:
- MedTech

Used tools:
- Radish, RabbitMQ, Bitbucket, Electric Commander , HP ALM, SAP

Used languages:
- Python

Development methodology:
- Agile

Senior Consultant / Senior Quality Assurance Automation Engineer
June 2017 - September 2018 (1 year 4 months)
Greater Barcelona Metropolitan Area

Validate the functionality of software products, according to the specific requirements, within a
predefined test plan, considering processes, procedures and testing quality assurance standards.

Main tasks and responsibilities:
- Analyze and design test cases based on functional and non-functional requirements.
- Create traceability between requirements and designed test cases.
- Implement and execute automated or manual test cases.
- Log test results and compare them against the expected results.
- Regularly report the status and document the found deviations.
- Analyze customer reported issues and provide a detailed report.
- Integrate all test environment components (HW, SW & Mechanic) and maintain the test
environment.
- Process knowledge and usage.

Projects:
- Telematic Control Unit

Used tools:

- RIDE Robot Framework, JIRA, Bitbucket , IBM Doors, RQM

Used languages:

- Python

Development methodology:

- Agile

Continental

6 years 9 months

Lead System Engineer

September 2016 - June 2017 (10 months)

Sibiu, Sibiu, Romania

Manage and drive the System team, align interfaces between disciplines, lead the overall requirements engineering, secure industrialization and perform product releases. Also responsible for customer support on technical topics.

Main tasks and responsibilities:

- Customer technical support.
- Analyze and provide recommendations/solutions in technical issues.
- Detailed planning of the project. Monitor, control and report the project status.
- Communicate and report status of requirements engineering topics.
- Ensure traceability.
- Conduct product delivery release meeting.
- Create system engineering release note.
- Conduct engineering change meeting.

Development methodology:

- V-model

Business or sector Automotive - Advance Driving and Assistance Systems BU

Software Test Manager

August 2015 - September 2016 (1 year 2 months)

Sibiu, Sibiu, Romania

Coordinate all test activities, necessary for validating the functionality of software products, according to the specific requirements, active involvement in test plan definition and reviews.

Main tasks and responsibilities:

- Active involvement in the requirements processing phase.
- Active involvement in test plan definition.
- Coordinate all the test activities (unit testing, integration testing) and control the progress .
- Analyze and design test cases based on functional and non-functional requirements.
- Create traceability between requirements and designed test cases.
- Implement and execute automated or manual test cases.
- Log test results and compare them against the expected results.
- Regularly report the status and document the found deviations.
- Conduct object reviews (test design, test results).
- Integrate all test environment components (HW, SW & Mechanic) and maintain the test environment.
- Process knowledge and usage.
- Involved in coaching activities especially for new employees.
- Acts as a reviewer for others' work products.

Projects:

- Radar systems

Used tools:

- Vector tools, MKS, IBM Doors

Used languages:

- CAPL (similar to C)

Development methodology:

- V-model

Quality Assurance Automation Engineer

March 2012 - July 2015 (3 years 5 months)

Sibiu, Romania

Validate the functionality of software products, according to the specific requirements, within a predefined test plan, considering processes, procedures and testing quality assurance standards.

Main tasks and responsibilities:

- Analyze and design test cases based on functional and non-functional requirements.
- Create traceability between requirements and designed test cases.
- Implement and execute automated or manual test cases.
- Log test results and compare them against the expected results.
- Regularly report the status and document the found deviations.
- Conduct object reviews (test design, test results).
- Integrate all test environment components (HW, SW & Mechanic) and maintain the test environment.
- Process knowledge and usage.

Projects:

- Lidar and Radar systems

Used tools:

- Vector tools, MKS, IBM Doors

Used languages:

- CAPL (similar to C)

Development methodology:

- V-model

Test Technician

October 2010 - March 2012 (1 year 6 months)

Sibiu, Romania

- Testing activities using labelling method.
- Document test results for own work products.
- Involved in coaching activities especially for new employees.
- Support and active involvement in Q&A document maintenance.
